

# 3Rs Literature Search Guide

For studies including animal experiments a literature analysis is essential to prove that no alternatives to the use of animals are available, the adequate animal model / methods are used and the 3R principles are implemented.

This information is requested in Form A ([Application for licence to perform animal experiment](#)): i.e. section 20, 25, 26, 35, 38 and 39.

## Search techniques

- Boolean Operators: AND, OR, NOT
- Parentheses: specify operator precedence
- Truncation: word variations (cell\*: cell, cells, cellulose, etc.)
- Phrase Search: specific word order ("mouse model")
- Specific fields (title, abstract, keywords, etc.)
- Subject headings (e.g. MeSH, Emtree)
- Tips for [systematic searching](#)

## Search strategy

- Define a search question.
- Define search terms (incl. synonyms).
- Use appropriate literature database(s) and specific database search techniques.
- If necessary modify search by using other terms, subject headings, etc.
- Report & save your search history.
